VP-HMX20C Samsung HD Memory Camcorder

1920 x 1080 Full HD 8GB flash memory camcorder

The VP-HMX20C sets the standard for the very latest in advanced video technology with Full HD 1920 x 1080 recording. 6.4 Megapixel CMOS image sensor and Dual Recording functionality to capture your favourite video or still moments without fail.

superior video compression (H.264)

'Video compression' no longer means 'video degradation'. With the new H.264 HD video CODEC, advances in compression technology have resulted in virtually loss-less compression. That means what you see is what you get. But your camcorder takes less memory to keep it! So you get to record more hours of video while using less memory, and in a simple, easy to manage, easy to transfer, easy to edit format.

real full HD (1920 x 1080 recording)

The HMX20C takes video at the highest digital visual resolution available today, 1920 x 1080 Full HD. 1920 x 1080 Full HD video means much more visual information, much greater clarity, brightness and detail than ever before. It also means that your video will be an exact pixel-by-pixel match for today's very best large screen HDTVs. The result is lifelike video with more natural colour and clarity, without the blurring or digital noise you might well be used to.

progressive HD

SAMSUNG's HMX20C delivers the very highest quality video by using progressive scan technology. It records HD quality video in progressive mode, so that the video is crisp and clear, regardless of how fast moving the subject may be. Progressive scan technology produces smooth images even when videos are played back at fast & slow speeds and on a PC.

super slow motion recording

High speed recording With the high-speed capture feature, the VP-HMX20C also lets you take up to 10 seconds of video at an astonishing 250 frames per second (fps), giving you ultra-detailed, crystal clear slow motion playback, useful for analysing a golf swing, dance movement, or any other motion that is too fast for the human eye to discern.

8Mega pixel Still image capture

SAMSUNG's Pixel-Rising technology utilises a pixel interpolation filter to convert recorded stills to the equivalent of 8-megapixels, enabling large format (11 x 17 in.) detailed prints of your images.

snap while you shoot with dual recording

The HMX20C's innovative dual recording capabilities make it easy to snap a still, even while you are recording a Full-HD movie! Simply press the shutter button as you are taking video and the HMX20C will take a 2-megapixel still without interrupting the video.

face detection AF

With SAMSUNG's Face Detection technology, the HMX20C makes sure that the video you take is the video you want to keep. Face Detection technology is a sophisticated image processing algorithm that automatically detects up to 8 faces within the frame, adjusting focus and exposure to make sure that your video shows your subjects in the best possible light.

high sensitivity mode

The HMX20C has a High Sensitivity Mode that allows the amazing ISO3200 camcorder to take clear video or shoot 8- megapixel stills. This extra light sensitivity means you get great stills in difficult lighting situations, without the blur caused by longer exposure times.

2.4Sec - quick power on

Never miss another one of life's precious moments with the Quick Start capability. The HMX20C is ready to shoot when you are; just turn it on and go. It doesn't get any easier or faster than that! With SAMSUNG's powerful, built-in flash memory you no longer need to waste your time waiting for your camcorder to boot up, read a disk or load a tape.

2.7" high-resolution wide touch LCD

The high-resolution wide-format 2.7" LCD Touch screen makes a huge difference. The 16:9 wide-screen format matches HDTVs so what you see as you shoot will be what you see when you get home. And navigating through the SCHMX20C's many helpful features is a breeze thanks to the easy-to-use Touch screen.

swivel hand grip & dual zoom button

The unique Swivel Hand Grip available for all of SAMSUNG's new camcorders lets them sit comfortably within the palm of your hand while allowing you to shoot video from a wide variety of angles - with just one hand. For example, you can shoot video from low angle positions without having to bend down or kneel.

docking cradle & anynet+

The HMX20C supports every video output terminal that is currently used by HDTVs. Plus, SAMSUNG's unique AnyNet+ technology (HDMI-CEC) lets you to control the camcorder with any AnyNet+ enabled TV remote control. And using just one line of HDMI cable makes connection easy while keeping the quality superb that means you can experience the highest quality digital video / audio on your HDTV without any data loss.
